How to set Debounce value in Race Coordinator

Step 1:

- Ensure that you have Race Coordinator version 1.9.x.x installed on your track computer
- Ensure that you have uploaded the lapCounter sketch version 1.0.0.8 (or later) to your Arduino track interface

Setting the Debounce value

1. Launch Race Coordinator
2. Then from the Race Day Setup screen, select **Track Setup > Expert Track Setup**
3. When the Track Manager screen appears click the **Configure** button
4. Go to the **Debounce Us** field and enter the required value - (value less than 1000 is best option)
5. Now click the **Accept** button to save your changes and return to the Track Manager screen
6. Now click on the **Update** button to save your changes
7. To return to the Race Day Setup screen, simply click the **X** in the top right corner to close.
8. All Done
